Summary — SWE with 5 years of professional experience specialized in the development of distributed systems.

Skills

Cloud Google Cloud Platform **Programming** Golang & TypeScript
Infra Docker & Kubernetes **Languages** English, French & Spanish

Professional Experience

Schneider Electric

Sept 2023 – Present
Nice, France

Senior Software Engineer - Full Stack

Context: Edge platform for IoT devices. System that provides an end to end solution that is able to collect data via PLCs and use it in order to make operations in real time

Stack: Golang, PostgreSQL, React, Redux and Single Spa

- Designed and implemented 5 of 30 **React** microfrontends using **Single-SPA** and **TypeScript**, each responsible for distinct business domains (e.g computation and alerting dahsboards) enabling independent development without disrupting other modules.
- Designed and implemented an **event-driven alert system** for real time monitoring of device variables, enhancing client visibility and control over device variables values.
- Collaborated with backend teams to integrate microservices via REST and GraphQL APIs, providing consistent data flows across **distributed frontends** within a unified UX.
- Built a **database retention and archiving mechanism** that automatically compresses and transfers aged IoT records to cold storage when the active dataset exceeds 10GB, reducing live DB footprint by over **30%**.
- Technical support to three developers.

Symphony Communications

Apr 2022 – Sep 2023
Sophia Antipolis, France

Software Engineer II - Frontend

Context: Modular monolith messaging platform for secure financial communications between banks like JPMorgan or HSBC

Stack: TypeScript, React, Redux, Docker, BackboneJS and Single SPA

- Led the **migration from Backbone.js to React**, refactoring legacy components (like admin and audit trail dashboards) into reusable modules and enabling the frontend transition from a monolith to a modular architecture.
- Optimized build time performance from **Webpack** to **Vite** reducing initial load times and improving developer productivity across multiple frontends.
- Collaborated with backend and DevOps teams to **modularize build pipelines**, introducing GitHub Actions and targeted Jenkins jobs that significantly reduced deployment time.
- Integration of **Snyk vulnerability scanning** into CI/CD workflows.
- Enhanced the **shared UI component library** to support dynamic runtime loading, accelerating delivery of new features across teams.
- Worked within a **7-person cross-functional team**, contributing to product design decisions and frontend scalability improvements.

Cubica Comunicación

Jul 2021 – Mar 2022
Vigo, Spain

Software Developer - Full Stack

Context: Internal CRM for Xplora Riviera, a Mexican travel company, to manage trips, bookings, and customer data

Stack: TypeScript, React, Redux, MySQL and Grafana

- Delivered a **CRM application** in collaboration with the CTO and design team, improving booking efficiency and customer tracking through real-time dashboards.
- Integrated **automated invoicing and notification systems**, eliminating manual steps in the reservation workflow.
- Built **Grafana-based analytics dashboards** to visualize purchasing patterns, enabling data-driven business decisions.

Certifications

- Google Cloud Engineer Associate
- Google Cloud Digital Leader
- Symphony Certified Developer

Issued: 2025

Issued: 2024

Issued: 2022

Education

Double Major

- *Bachelor of Computer Engineering at University of Vigo*
Minors: Cloud Computing;
- *Bachelor of Business Management at University of Vigo*
Minors: Banking and Fractional Reserve;
